POYNT

DeVinePOS
SYSTEMS AND SOLUTIONS

Connect Poynt to Your Favorite POS

Upgrade your business operations and customer experience...
painlessly

Poynt allows businesses to wrap a beautiful payment experience around their POS. This lets your business capitalize on modern features like NFC payments (like Apple Pay), EMV compliance, and pay at the table capabilities.

The integration process is simple and our technical implementation partners manage the process, start to finish. A merchant's time commitment is typically no more than a few hours and the benefits for customers and staff are immediate.

Benefits

▶ Reduce errors made by servers using traditional order input methods.

▶ Save time by automatically closing checks once payment is received on the Poynt Smart Terminal

▶ Flexible insights - staff can view open tables and orders directly from the Poynt Smart Terminal

▶ Process payments at the table, including splitting checks and customizing tips

Poynt integrates into major POS systems, including NCR Aloha, Micros and Dinerware.

The Poynt Smart Terminal integrated easily to our Aloha POS, allowing us to enhance our operations for our team and our customers and reduce fraud thanks to new EMV capabilities. Our servers love the convenience of having customers pay at the table, with no trips to and from a printer; customers love the modern experience of paying, signing and receiving a receipt in one fell swoop. Additionally, I love the convenience of being able to monitor sales in the real-time using Poynt HQ app on my phone.
